Protection

DEAR SUPPORTERS OF EQUESTRIAN SPORTS,

No matter if competing or pleasure riding - do not take any risk in question of your personal protection.

The right choice of your individual protection wear might be crucial in case of an accident. Therefore we combined important background information, expertise and experiences with our product know-how to protect riders of all levels who do not want to take any risk.

Your Safety is our concern! Our team has committed itself to this philosophy and is working permanently on new ideas and concepts concerning your personal protection. The result is a broad selection of body protectors for beginners, advanced and professional riders which is continually being improved.

We want you to ride well-protected!

Yours Stefan Schwanbeck

Managing Director and Founder of USG United Sportproducts Germany GmbH
Active Member of the European Committee for Standardisation Sport/Body Protectors

IT IS ABOUT YOUR SECURITY!

Body Protector for Riders and Drivers

- Basic protection for riders and drivers: Offers the maximum level of protection by fully meeting European standard EN 13158-2009, Level 3
- In the USA and Canada body protectors have to meet demands of ASTM F1937-04 and should be SEI approved.
- May reduce severity of injuries when falling off, being kicked or stood on by a horse.
- Designed for optimum comfort and mobility.
- Please ask your authorised USG retailer for advice when fitting your new body protector.

Sara and Frank Ostholt wearing »USG Flexi«. Its block structure system allows extreme comfort and easy adaption, even in big sizes. You will find further information on page 12-13.

Individual Silver for Sara Algotsson-Ostholt and her horse »Wega« at the Olympics 2012 in London. Sara has been well protected by her »FlexiPlus EquiAirbag®«.

Riding Helmet

- Obligate for all competitions.
- May reduce head injuries when falling off a horse.
- Must be certified according to EN 1384.
- Please ask for your retailer's advice when fitting your new helmet.
- A helmet should never rock backwards, forwards or sideways nor should it be too tight.
- Obligatory: 4 point system for a safe fixation.
- Check the length of the chin strap. It should be reasonably tight.

Frank Ostholt wearing the USG's helmet »Military«, Sara Ostholt using the »Comfort Basic«, please also see page 17.

Airbag-Protector

- Useful additional protection for the rider's back.
- Must be certified according to EN 1621-4 as of 2013.
- Can be pulled easily over the back part of your body protector or worn as an additional jacket over it.
- For your protection, a simple »click« is all it takes to connect you to the saddle.
- If you are unseated or thrown from a horse, the airbag system is being activated.
- Unique: The airbag can support the spinal column in its entire length.

Sara and Frank Ostholt wearing the USG combination »FlexiPlus EquiAirbag®«, where you find USG's »EquiAirbag® for Flexi« combined with the body protector. For more information, please see pages 10-11.

Airbag-Protectors – What's most important!

©Jutta Bauernschmitt

IN FEW WORDS

An Airbag Protector should:

- 1 Have a quick trigger time according to EN 1621-4 within 200 ms!
- 2 Protect the entire spine from head to tailbone.
- 3 Absorb impact energy according to EN 1621-4 Level 1 or Level 2.

1. Instant Protection

An Airbag protector can only serve its purpose when it is fully inflated in time. The airbag will be activated as soon as the rider is separated from the horse. Once the activation cable is torn, the protector will be inflated. Depending on the way to fall, the timeframe may be very short. Is the airbag triggered too slowly, it cannot protect the rider from impact injuries when falling on the ground. According to EN 1621-4 a maximum of 200 ms (= trigger time + inflation time) is required before the airbag is fully inflated. Test results for EquiAirbag®: 60 ms + 88 ms = Protection within 148 ms!

2. Parts of the Body to be protected

Only an Airbag protector is able to protect the entire spinal column provided, it is able to unfold fully in time. Then it can save the vital and especially endangered cervical spine from injuries and also give you neck coverage. The dorsal vertebrae as well as the nerve tracts are most endangered when falling off a horse. Especially injuries of the spinal cord are particularly severe, as they may lead to paraplegia.

3. Shock Absorption

Airbag protectors according to EN 1621-4 absorb impact energy differently depending on their certified level.

Level 1: Average transmitted forces of 4.5 kN max

Level 2: Average transmitted forces of 2.5 kN max (EquiAirbag®: 1.4 kN)

EquiAirbag's® good shock absorption was confirmed during CE-testing. The transmitted forces of only 1.4 kN fully meet Level 2 requirements.

Do not confide in any airbag which does not meet requirements of neither Level 1 nor Level 2!

Protect your Back

Protection of your spinal column is crucial to prevent injuries of the spinal cord and imminent paraplegia when falling off a horse! Therefore, confide in certified protection gear only!

You can see from the picture below, how well airbag and body protector combine the best of both products!

Presently, EquiAirbag® is the only airbag-protection system for riders and drivers that is certified according to **EN 1621-4**. EquiAirbag®-protectors are available as the jacket itself made of high-quality cordura® or combined with USG's body protector »USG Flexi«.

You will find the most important protective qualities of two CE-certificates combined in the one product »FlexiPlus EquiAirbag®« which is the winner of BETA Innovation Award for Safety + Security 2013.

A fall off the horse is especially dangerous for your spine.

Allround Protection!

Additional neck coverage!

Block structure system to give a flexible fit.

Protection of the complete spine

EQUIAIRBAG® in daily Use

Whether cross country or show-jumping - EquiAirbag® can protect your back very effectively. EquiAirbag® is the only airbag protector for equestrian sports that is certified according to EN 1621-4. It has also proved itself in daily use and competition.

Case Study 1 - Cross-Country Accident

According to statistics of the FEI, most accidents occur after a jump, just as you can see from the following example.

Picture 1: Horse touching the jump and rider losing his balance.

Picture 2: Rider falling off.

Picture 3: Rider falling backwards.

Picture 4: Rider reaching the ground with his tailbone first being well-protected by the EquiAirbag® protector.

You may guess from this picture sequence that in the moment after picture 4, EquiAirbag® has given neck coverage. Horse and rider remained sound and unharmed. The rider was able to rise and leave the grounds by himself.

Case Study 2 - Show-Jumping Accident

Picture 1: Horse and rider falling trying to overcome a jump.

Picture 2: Rider falling backwards on the poles. Since both are falling together, the rider is being separated very late. Only thanks to the extremely quick inflation, her back does not get hurt.

Picture 3: Rider getting up without external help and taking off her airbag protector.

Picture 4: Everything okay!

EQUIAIRBAG®

CE-tested and approved

New Airbag Norm
EN 1621-4

USG EquiAirbag® Back Protector

Certified according to EN 1621-4 and individually adjustable. With a trigger time of 60 ms and inflation time of 88 ms it can absorb impact energy of 1.4 kN. The jacket weighs 1.400 g and allows for fully body movement. »USG EquiAirbag®« comes ready to use, and is supplied with its gas canister installed and with a lanyard to connect the rider to the saddle. If not damaged, the airbag system can be refilled again. Please read the manual that is included before use.

EquiAirbag® Back Protector Vest

- 1 Top protection results, CE-tested and approved to EN 1621-4
- 2 Currently quickest airbag protector
- 3 Protects entire spine
- 4 Neck coverage, no retroflexion of head

Ingrid Klimke

IN FEW WORDS

- 1 The eventing profi Ingrid Klimke ist equipped with »FlexiPlus EquiAirbag®«.
- 2 Being eventing Olympic athlete and a mother, she does not take any risks as far as her health is concerned.
- 3 Because of her positive experience with the combined protectors she is recommending »FlexiPlus EquiAirbag®«.

© Julia Rau, rauphoto.de

Face to Face with Ingrid Klimke

Eventing champion and winner of Olympic team gold 2012 in London Ingrid Klimke has been using USG's protector combination »FlexiPlus EquiAirbag®« since 2011. We have asked her for her experiences.

USG: We are delighted that you have decided to wear »FlexiPlus EquiAirbag®«. What made you come to this decision?

Ingrid Klimke: Well, when competing you can see different versions of inflating jackets that seem to be very similar at first glance. In respect for my family and having witnessed some really bad falls in recent years, I decided to take the time and ask for detailed information and advice. I learned that »EquiAirbag®« is currently the only airbag protector for riders that is certified – which really makes a big difference to all the other airbags.

USG: Have you already had any falls using the »FlexiPlus EquiAirbag®«? Please tell us about your personal experiences.

Ingrid Klimke: Fortunately, I have not fallen off since I decided to wear USG's »FlexiPlus EquiAirbag®«. Therefore, I did not gain any experiences in that regard. This protector, however, gives me a real save feeling and is also very comfortable to wear.

USG: When do you wear the »FlexiPlus EquiAirbag®«?

Ingrid Klimke: Whenever I do Cross Country, go hacking or when riding young and unexperienced horses. Being mother and professional rider at the same time, I do not want to take any unnecessary risks as far as my health is concerned. I have practised handling of »EquiAirbag®« in my daily training sessions and got used to it so well, that I actually like to wear the Airbag protector in competition and all other situations that might bear a risk.

USG: Can you recommend the »FlexiPlus EquiAirbag®«?

Ingrid Klimke: Most definitely! My husband started using this protector combination and is also very pleased with it. Also my cross country colleagues Sara and Frank Ostholt as well as Kai-Steffen Meier have been using USG's »FlexiPlus EquiAirbag®« for a while. No other product is able to protect the spinal column as effectively as »EquiAirbag®«. And since this part of the body is most endangered when falling off a horse, its protection is extremely important to me.

USG: Thank you very much for your positive feedback and best of luck for the future!

Innovation Award: »FlexiPlus EquiAirbag®«

»EquiAirbag® for Flexi«

The black EquiAirbag® protector is fully CE certified according to EN 1621-4. It is designed to be worn in conjunction with USG's body protector »USG Flexi«.

Simply pull »EquiAirbag®« over the back part of »USG Flexi«. It can be removed again just as easily.

The »EquiAirbag®« offers protection for the back, reduces flex in the spine and gives neck coverage as well as it helps to prevent impact injuries.

The protector comes ready to use, and is supplied with its gas cartridge installed and with a lanyard to connect the rider to the saddle. Extra gas cartridges are available to buy (page 9).

Please read the manual that comes with the airbag protector before use.

»USG Flexi« is not included in delivery.

For further information please see the pages 12-13.

FAQ: More Information about Protection in Equestrian Sports

What is CE Certification?

With the CE Marking logo, it is indicated that the product meets the legal requirements described in the applicable European Directive and is a part of the personal equipment (PSA). The CE-marking on its own is not very specific, relevant are the protection standards as you can see from the attached information chart.

What is Euronorm Certification?

Euronorms inform about technical requirements of products. In protection gear they inform about their suitability, expected protectability as well as which parts of the body can be protected. The product is being certified when tested successfully at an approved institute according to the norm's requirements.

What is ASTM and SEI?

ASTM stands for American Society for Testing and Materials. The ASTM standard defines performance criteria and test methods. Manufacturers may voluntarily submit their products for further testing by the Safety Equipment Institute (SEI) using the test methods defined by the ASTM standard. If these samples pass the tests, they may be labeled ASTM/SEI certified.

What Norms are there for Equestrian Protective Gear?

Protector	Relevant Norm	Applicability
Riding Helmet	EN 1384/ASTM 1163-4a	In general for riding and driving.
Body Protector for Jockeys	EN 13158-2009, Level 1	Only for licensed jockeys whilst racing.
Body Protector for Riders in low risk situations	EN 13158-2009, Level 2	Only for riding in low risk situations providing a lower than normal level of protection.
Body Protector for Riders and Drivers, normal risk situations	EN 13158-2009, Level 3 ASTM F1937-04	For riding in normal risk situations and for competition.
Back Protector, also Airbag Protector before implementation of EN 1621-4	EN 1621-2:2003	To protect the rider's back.
Airbag protector	NEW! EN 1621-4, Level 1 or better Level 2	Effective additional protection to body protectors, may complement protection areas. Full protection of the back.

Attention!

Some products show EN 340 certification which is a mere cross reference and does not say anything about any level of protection.

What does the BETA-label mean?

This standard is a UK certification scheme operated by BETA (British Equestrian Trade Association). Testing is based on EN 13158, but the scheme involves additional annual re-tests on the certified protector by a BETA-approved laboratory. Therefore, quality of the body protector is ensured in shorter intervals. Unlike the mandatory EN-certification, the BETA-label is required by the manufacturer voluntarily.

EN 13158	BETA
Level 1	Black label
Level 2	Brown label
Level 3	Purple label

OUR VISION IS YOUR SAFETY!

Since we are devoted riders and organise competitions ourselves, it is our biggest concern to increase safety in equestrian sports. Managing Director Stefan Schwanbeck cooperates with sport scientists, physicians and safety experts to work out requirements for EN 13158-2009. He is also active member of the European Committee for Standardisation Sport/Body Protectors. We gather all this expertise and experiences to combine them in our safety products hoping that they may support your personal protection.

Where can I buy USG-Products?

No matter whereabouts you are, there will be an USG retailer near you listed on the homepage of USG Germany or on the homepage of one USG distributor you find below. Please ask your retailer for further advice on protection gear.

Contact us

Please also visit us at www.usg-reitsport.de or on facebook. Should you have individual questions, please do not hesitate to send us an e-mail to info@usg-reitsport.de and we will endeavour to answer your query as soon as possible. Furthermore, you can meet us at various fairs or competitions. We are looking forward meeting you!
